Research outputs

Listing of Research outputs

Callous-unemotional traits in youth with ASD: Replication of prevalence estimates and associations with gaze patterns when viewing fearful faces
Research output: Contribution to journal › Article

Gaze following and attention to objects in infants at familial risk for ASD
Research output: Contribution to journal › Article

Infant regulatory function acts as a protective factor for later traits of autism spectrum disorder and attention deficit/hyperactivity disorder but not callous unemotional traits
Research output: Contribution to journal › Article

Functional EEG connectivity in infants associates with later restricted and repetitive behaviours in autism; a replication study
the BASIS TEAM, Haartsen, R., Jones, E. J. H., Orekhova, E. V., Charman, T. & Johnson, M. H., 4 Feb 2019, In : Translational psychiatry. 9, 1, p. 66 66.
Research output: Contribution to journal › Article

Latent trajectories of adaptive behaviour in infants at high and low familial risk for autism spectrum disorder
Research output: Contribution to journal › Article

Visual search and autism symptoms: What young children search for and co-occurring ADHD matter
Research output: Contribution to journal › Article

Adaptive Behaviour and Cognitive Skills: Stability and Change from 7 Months to 7 Years in Siblings at High Familial Risk of Autism Spectrum Disorder
Research output: Contribution to journal › Article

Early developmental pathways to childhood symptoms of attention-deficit hyperactivity disorder, anxiety and autism spectrum disorder
Research output: Contribution to journal › Article

Maternal Attributions of Infant Behavior and Parenting in Toddlerhood Predict Teacher-Rated Internalizing Problems in Childhood
Research output: Contribution to journal › Article
Prediction of Autism at 3 Years from Behavioural and Developmental Measures in High-Risk Infants: A Longitudinal Cross-Domain Classifier Analysis
Research output: Contribution to journal › Article

Developmental change in look durations predicts later effortful control in toddlers at familial risk for ASD
Hendry, A., Jones, E. J. H., Bedford, R., Gilga, T., Charman, T., Johnson, M. & the BASIS Team, 29 Jan 2018, In : Journal Of Neurodevelopmental Disorders. 10, 1
Research output: Contribution to journal › Article

Children’s Executive Function Attenuate the Link Between Maternal Intrusiveness and Internalizing Behaviors at School Entry
Research output: Contribution to journal › Article

Method of homicide and severe mental illness: A systematic review
Research output: Contribution to journal › Article

Neurocognitive and observational markers: Prediction of autism spectrum disorder from infancy to mid-childhood
Research output: Contribution to journal › Article

The role of infants’ mother-directed gaze, maternal sensitivity, and emotion recognition in childhood callous unemotional behaviours
Research output: Contribution to journal › Article

Callous-unemotional traits moderate executive function in children with ASD and ADHD: a pilot event-related potential study
Research output: Contribution to journal › Article

Daily touchscreen use in infants and toddlers is associated with reduced sleep and delayed sleep onset
Research output: Contribution to journal › Article

Randomised trial of a parent-mediated intervention for infants at high risk for autism: Longitudinal outcomes to age 3 years
Research output: Contribution to journal › Article

Visual search performance in infants associates with later ASD diagnosis
Research output: Contribution to journal › Article
Toddlers’ Fine Motor Milestone Achievement Is Associated with Early Touchscreen Scrolling
Research output: Contribution to journal › Article

Erratum: Sex differences in the association between infant markers and later autistic traits (Molecular Autism (2016) 7 (21))
Research output: Contribution to journal › Article

Sex differences in the association between infant markers and later autistic traits
Research output: Contribution to journal › Article

Flexible integration of visual cues in adolescents with autism spectrum disorder
Research output: Contribution to journal › Article

Early gross motor skills predict the subsequent development of language in children with autism spectrum disorder
Research output: Contribution to journal › Article

Reduced Face Preference in Infancy: A Developmental Precursor to Callous-Unemotional Traits?
Research output: Contribution to journal › Article

What clinicians need to know about statistical issues and methods
Research output: Chapter in Book/Report/Conference proceeding › Chapter

Enhanced Visual Search in Infancy Predicts Emerging Autism Symptoms
Research output: Contribution to journal › Article

Predicting the rate of language development from early motor skills in at-risk infants who develop autism spectrum disorder
Research output: Contribution to journal › Article

Shorter spontaneous fixation durations in infants with later emerging autism
Research output: Contribution to journal › Article

Behavioural markers for autism in infancy: Scores on the Autism Observational Scale for Infants in a prospective study of at-risk siblings
Research output: Contribution to journal › Article

Parent-mediated intervention versus no intervention for infants at high risk of autism: a parallel, single-blind, randomised trial
From early markers to neuro-developmental mechanisms of autism

Additive effects of social and non-social attention during infancy relate to later autism spectrum disorder

Motor development in children at risk of autism: A follow-up study of infant siblings

What you see is what you get: contextual modulation of face scanning in typical and atypical development

Developmental pathways to autism: A review of prospective studies of infants at risk

Early Language Profiles in Infants at High-Risk for Autism Spectrum Disorders

Failure to learn from feedback underlies word learning difficulties in toddlers at risk for autism

Precursors to Social and Communication Difficulties in Infants At-Risk for Autism: Gaze Following and Attentional Engagement

Gaze Following, Gaze Reading, and Word Learning in Children at Risk for Autism

Parent-infant interaction in infant siblings at risk of autism

Social and attention factors during infancy and the later emergence of autism characteristics
Fusion of visual cues is not mandatory in children
Research output: Contribution to journal › Article

Development of cue integration in human navigation
Research output: Contribution to journal › Article

The above report is produced using the following setup
Ordered by: null
